EMD SD80MAC: Locomotive Roster

<http://crcyc.railfan.net/>

Updated: 12-18-03

An interim 5,000 horsepower locomotive trapped between the 4,000hp SD70MAC and the 6,000hp SD90MAC, the SD80MAC was only ordered by Conrail. Needing high horsepower, high tractive-effort locomotives in the mid-1990s for hauling coal over the Pittsburgh Line and the Boston Line, Conrail turned to General Motors Locomotive Group's (GMLG) for their new 5,000hp SD80MAC.

The roster below is comprehensive for these units, which were purchased beginning in November 1995 and survived on roster until 1999. If you are interested in additional retirement, renumbering, and disposition information after June 1999, then see Railspot.com, which attempts to track such information for various railroads and locomotives. This roster based on information from issues of Diesel Era and X2200South. Thanks to Jeffery Ward for additional info. If you happen to spot an error in the roster or have additional information, please contact me.
